

ABSTRACT OF THE DISCLOSURE

The glittering ink composition of the present invention contains a glass flake pigment, a water-soluble resin, a water-soluble organic solvent and
5 water as essential ingredients. The content of the glass flake pigment is 0.01 - 40% by weight relative to the total amount of the ink composition. Moreover, the ink composition contains a synthetic resin emulsion as a binder component for fixing the glass flake pigment to a handwriting or a coated film in 0.01 - 40% by weight in solids relative to the total amount of
10 the ink composition. The synthetic resin emulsion has an anionic property or a nonionic property and its minimum film forming temperature is not higher than 20°C.
